Discovery C-Band Migration 2021

April 30, 2021

Dear Affiliate,

We want to advise you of some upcoming changes to the satellite delivery of several of our programming services.

In an effort to make additional spectrum available for 5G wireless services, Discovery is required to relocate several networks. We want to advise you of the transition of the East SD and West SD feeds of the below networks to an HD – SD down-conversion model.

Effective **December 1, 2021**, the **Discovery, TLC, Animal Planet, OWN East SD and OWN West SD** feeds listed will only be available on **G13 TP 24, and SES 11 TP 11**. Accordingly, beginning as of **May 1, 2021**, each of your company's systems distributing any of these East/West SD feeds should down-convert the HD signal of each feed to SD for distribution to your subscribers.

HD Network	Current Position	New Location
	Galaxy 13, Tp 22	SES 11, Tp 11
	Galaxy 13, Tp 22	SES 11, Tp 11
	Galaxy 13, Tp 22	SES 11, Tp 11
	Galaxy 13, Tp 22	Galaxy 13, Tp 24

Click image to view

- To begin the transition and/or to see if you qualify for a receiver please call **240-662-7537** **between 9am - 6pm ET. Monday-Friday**
- To authorize your receiver or set up down-converting on your existing HD receiver call our 24/7 authorization center at **240 -662-7508**
- Technical one sheets and project information are available at www.discoveryaffiliateops.com

Thank you,

Lenika Shah | Director - Affiliate Operations | Discovery Communications

P: 240-662-7537
